Problem 1

Solve the following using KKT conditions

Minimize f = 4x, -3x2 + 2x12 - 3x, x2 + 4x22 g,(x): 2x1 -1.5x2=5

KKT (anditions.

$$\nabla f - \angle \lambda_i \nabla g_i = 0 =) \frac{\partial f}{\partial x_1} - \lambda \frac{\partial g}{\partial x_2} = 0 \Rightarrow 4 + 4x_1^2 - 3x_2 - \lambda(z) = 0$$

$$\frac{\partial f}{\partial x_2} - \lambda \frac{\partial g}{\partial x_2} = 0 \Rightarrow -3 - 3x_1 + 8x_2 - \lambda(-1.5) = 0$$

$$2x_1 - 1.5x_2 - 5 = 0$$

In matrix form:

$$\begin{cases} 4 - 3 - 2 \\ -3 + 8 + 1.5 \\ 2 - 1.5 + 0 \end{cases} = \begin{cases} x_1 \\ x_2 \\ = 3 \\ 5 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_1 = 2.5 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \\ 7 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2 = 0 \end{cases}$$

$$\begin{cases} x_1 = 2.5 \\ x_2$$

Df predated = 1 Ab = 7(0.1) = 0.7 +

Yes the lagrange multiplier & accomplety predicts the change in objective value. The difference between the actual and the predicted is only 10,005

Problem 1

- c.) Are the KKT equations for a problem with a quadratic objective and a linear equality constraint always linear?
 - Yes. If f is quadratic, of will be linear. Since g is also a linear equality constraint, the KKT equations will always be linear

What about a problem with a quadratic objective and a linear inequality constraint?

Yes. Of will be linear same as before and so will any
g (constraint) that is found to be a binding inequality
constraint

Problem 2 No problem 2 given? [Problem 3] Solve the following using the KKT conditions: Minimize $f(x) = x_1^2 + 2x_2^2 + 3x_3^2$ $g_1(x) = x_1 + 5x_2 = 12$ $g_2(x) = -2x_1 + x_2 - 4x_3 \le -18$ [Skell Put into proper form. Max $f(x) = -x_1^2 - 2x_2^2 - 3x_3^2$ st. $g(x): x_1 + 5x_2 = 12$

$$\frac{\partial f}{\partial x_3} - \lambda_1 \frac{\partial g_1}{\partial x_3} - \frac{\lambda_1 \partial g_2}{\partial x_3} = 0 = 0 - 6x_3 - \lambda_1(0) - \lambda_2(-4) = 0. \quad (3)$$

$$g_1(x) = 0 = 0 \quad (4)$$

$$g_1(x) = 0$$
 =) $-2x_1 + x_2 - 4x_3 + 18 = 0$ (5)

Assume gi, gr are both binding and try to solve:

Put into linear matrix farm:

$$\begin{bmatrix}
-2 & 0 & 0 & -1 & z \\
0 & -4 & 0 & -5 & -1 \\
0 & 0 & -6 & 0 & 11
\end{bmatrix}$$

$$\begin{bmatrix}
x_1 \\
x_2 \\
x_3 \\
0
\end{bmatrix}$$
Solving
$$x_1 = 4.7170$$

$$x_2 = 1.4566$$

$$x_3 = 2.5057$$

$$x_1 = -1.9170$$

$$x_1 = -1.9170$$

$$x_2 = 3.7585$$

Sine he corresponding to gelt) an inequality constraint is positive, and he corresponding to gelt) can be positive or negative, the KKT conditions are safisfied

```
Min f(x)=x12 + X2
Problem 4
                      91(x) = X12 + X22-9=0
                      gi(x) = x1 + x2 -160
                      93(x) = X1 + X2 -1 = 0
a.) Verify that [-2.3723, -1.8364] is a local optimum
  Step ! Put into propper form:
                  Max P(x) = -x_1^2 + x_2
                        gilx): X12+X22-9=0
                        9,(x): X1+X2-1 50
                        93(x): X1+X2-1=0
  Step 2 | See which constraints are binding:
           gick) is binding since it is an equality constraint
          check g2(x):
            -2.3773 + (-1.8364)2-1 = 0 => 12 ×0 and g2(x) is binding
          check g3(x):
          -2.3723 -1.8364 -1 = -5.2087 <0 =) 13=0 and 93(x) is not binding
 Step 3 | Write out Lagrange Multiplier Equations
        \frac{\partial f}{\partial x_1} - \lambda_1 \frac{\partial g_1}{\partial x_1} - \lambda_2 \frac{\partial g_2}{\partial x_2} = -2x_1 - \lambda_1(2x_1) - \lambda_2(1) = 0
         \frac{df}{dx_2} - \lambda_1 \frac{dg_1}{dx_2} - \lambda_2 \frac{dg_2}{dx_2} = -1 - \lambda_1 (2x_2) - \lambda_2 (2x_2) = 0
Step 4 Substitute in the point
          -2(-2.3723) - \lambda_1((2)(-2.3723)) - \lambda_2 = 0
          -1 - \lambda_1(2(-1.8364)) - \lambda_2(2(-1.8364)) = 0
           > X2 = -4.7446 X1 + 4.7446
             Sub (3) -> (2)
             -1 - \lambda_1(2(-1.8364)) - (4.7446)(2(-1.8364)) = 0
          → -1 + 3,6728 λ1 + 17,4259 λ, + 17,4259 =0
         =) \lambda_1 = -0.7785 =) <math>\lambda_2 = 1.0508
                                                                        Next Page -
```

Problem 4 Continued

So we have that A, is negative (which is ok since gilx) is an equality constraint), and Az is positive (which is required since gilx) is an inequality constraint) and so we have a valid Set of Lagrange Multipliers which means that we can conclude that the point [-2.3723, -1.8364] is a local optimum

b.) Verify that [-2.5] - 1.6583] is not a local optimum Check if $g_2(x)$ is binding: $-2.5 + (-1.6583)^2 - 1 = -0.75 =)$ $g_2(x)$ is not binding and $h_2 = 0$ = Check to see if $g_3(x)$ is binding: -2.5 - 1.6583 - 1 = -5.1583 =) $g_3(x)$ is not binding and $h_3 = 0$ = .

Set up the KKT equations

 $\frac{\partial f}{\partial x_1} - \lambda_1 \frac{\partial g}{\partial x_2} = -2x_1 - \lambda_1(2x_1) = 0$ $-2(-2.5) - \lambda_1$ $\frac{\partial f}{\partial x_2} - \lambda_1 \frac{\partial g}{\partial x_2} = -1 - \lambda_1(2x_2) = 0$ $-1 - \lambda_1(2(-1))$

Plugging in for \times . $-2(-2.5) - \lambda_1(2(-2.5)) = 0 \Rightarrow \lambda_1 = -1$ $-1 - \lambda_1(2(-1.6583)) = 0 \Rightarrow \lambda_1 = 0.3$

Since his are not consistent, this point does not satisfy
the KKT equations and connect be an optimum

(.) Next Page ->

Problem 4 Continued

of the contour plat

By inspection, we see that the optimum is somewhere around [-0.25, -1.1] and at this point $g(x) = x_1 + x_2 - 1 \le 0$ is not a binding constraint. Thus only the constraint $g(x) = x_1 + x_2^2 - 1 \le 0$ is binding and we must solve for Lambda (1)

$$\nabla f - \xi \lambda_i \, \nabla g_i = 0 = 0 \qquad \frac{\partial f}{\partial x_i} - \lambda_i \frac{\partial g}{\partial x_i} = 0 \Rightarrow -2x_i - \lambda_i (1) = 0$$

$$g_i(x) = 0$$

$$\frac{\partial f}{\partial x_i} - \lambda_i \frac{\partial g}{\partial x_i} = 0 \Rightarrow -1 - \lambda_i (2x_i) = 0$$

$$g_i(x) = 0 \qquad \Rightarrow x_1 + x_2 = 1$$

In matrix form:

$$\begin{bmatrix} -1 & 0 & -1 \\ 0 & 0 & -2 \times 2 \\ 1 & \times 2 & 0 \end{bmatrix} \begin{bmatrix} \times_1 \\ \times_2 \end{bmatrix} = \begin{bmatrix} 0 \\ +1 \\ 1 \end{bmatrix}$$
This desirt help us much sing the equations are nonlinear...

Using Matlas Esclue() to solve the above system of equations

$$=) \quad \begin{array}{c} x_1^* = -0.2258 \\ x_2^* = -1.1072 \\ \end{array}, \quad \lambda = 0.4516 \end{array}$$

(f*=-1.0562

Since It is positive, we can conclude that this point is a valid local optimum

```
MATLAB for problem 4 part c clc clear

x0 = [-0.25, -1.1, 1];

x = fsolve(@myfun, x0)

function F = myfun(x)
F(1) = -2*x(1) - x(3);
F(2) = -1 -x(3)*2*x(2);
F(3) = x(1) + x(2)^2 -1;
```

end
